

European larch

Larix decidua Mill., 1768

A pioneer tree at high altitude, its deciduous needles are fine enough to let the light through. In autumn, they are adorned with magnificent yellow-orange colours. Its cones are a characteristic dark purple in spring.

Common names

European larch

Environment

High altitude forests

Altitude

720-3050 m

Season

- all year round

Size

100 to 3000 cm
