

# Ranunculus kuepferi

Ranunculus kuepferi Greuter & Burdet, 1987

This beautiful plant has narrowly lanceolate, greyish-green leaves. Its stem is slightly hairy at the top. Its beautiful flowers are pure white. This buttercup blooms early in the spring, as early as April when the snow has barely melted. When in flower alone, it can "whiten" the alpine grasslands! Unfortunately, this is a sight that summer holidaymakers are unable to see.

## Common names

Renoncule de Küpfer

## Environment

Alpine and subalpine grasslands

## Altitude

1650-2650 m

## Season

- april-july

## Size

5 to 25 cm

## **Ranunculus kuepferi**

Ranunculus kuepferi Greuter & Burdet, 1987
